PRESS RELEASE

ARETI-MINSAIT, ARTIFICIAL INTELLIGENCE AND NEW TECHNOLOGIES FOR THE NEXT GENERATION ELECTRICITY NETWORK

**An agreement for the management and remote control of Rome's medium
and high voltage substations has been signed**

**It marks a significant step towards the digitalisation and automation of
Italy's electricity network**

Rome, 21 October 2024 – Areti, a company of Acea Group, specialised in the distribution of electricity, has launched a project to enhance Rome's electricity network, marking an important step towards the digitalisation and automation of the energy infrastructure.

Minsait, a technology partner and a company of the Indra Group, will provide the Onesait Edge platform and the Edge+ device, advanced technologies based on artificial intelligence and Edge Computing, that will enable the remote control the networks and Areti's medium and high voltage substations in the city of Rome.

This project is part of a digital transformation journey, creating the conditions for an energy future where new technologies, such as artificial intelligence, will lead to more sustainable and efficient energy infrastructures.

The solution will be presented at the ENLIT Europe event, which will take place in Milan from 22 to 24 October.
